Profile

I am a 22 year old recent graduate with a degree in Communication and Multimedia Design from a Dutch university, with a strong focus on user experience (UX) and user interface (UI) design.

Throughout my 4 year study, I collaborated on numerous projects with industry professionals introduced to us as clients, simulating real-world customer interactions and refining my design skills. I've worked on developing e-learning apps for children, redesigning websites, and helping to build brand identities.

During a 4 month internship, I gained practical experience in web design and contributed to improving an existing website, enhancing its usability and visual appeal.

Known for being hardworking, creative, and a quick learner, I am excited to start my professional journey in UX/UI design and continuously develop my expertise in a collaborative, dynamic setting.
